Suffolk Pipe Repair Project to Cause Traffic Detours

SUFFOLK, VIRGINIA (January 5, 2011) Suffolk Public Utilities Department will repair a leaking 16-inch valve on a cast iron main at the intersection of East Washington and Pinner Streets from January 10, 2011 until January 12, 2011. Water customers will see no loss of service during the repairs. However, traffic will be detoured around the work site.

East Washington Street will be closed at the railroad crossing. Westbound traffic will be detoured from East Washington to Hall Avenue to South Main Street and back onto East Washington. Commerce Street remains an option, as well. Eastbound traffic will be detoured from East Washington Street to Franklin Street to Bank Street to Liberty Street, then back to East Washington Street.
